Intelligent Human Capital

CONNECTING YOUR BUSINESS TO THE TECHNOLOGY RESOURCES YOU NEED

Intelligent Human Capital means "the right talent on demand". The flexibility to add or remove resources as your business environment fluctuates. We provide qualified talent with the precise skills you need, for as long as you need them.

Our clients and people choose to work with us because of how we work with them - with service that exceeds expectations and a personal commitment to success.

Working with you

UNDERSTANDING OBJECTIVES. MEASURABLE RESULTS.

An Arc-Intel engagement begins with tenured business and technical professionals who understand current market forces and can demonstrate effective leadership during collaboration with client teams, management, technical staff and consultants. We offer flexible pricing and delivery models to include: Fixed Price Projects, Time & Materials, and right skill, right time, Staff Augmentation.

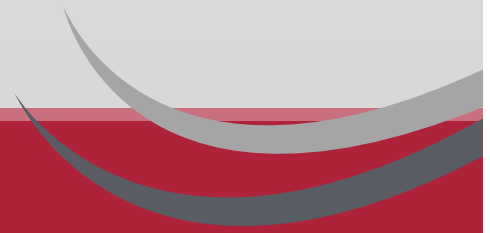

Our goal is exceeding expectations by delivering high-quality services on-time. How do we accomplish this?

- Clearly define the scope of our agreements in a statement of work, including service level agreements.
- Define success criteria and management roles.
- Communicate our progress frequently and clearly.
- Record, track and report status to ensure accurate measurement of our productivity and assessment of our performance, as well as our ability to meet and exceed our commitments.

Arc-Intel's seamless delivery and depth of experience results in quality solutions at a much lower cost than our client's traditional internal resources.

We're driven. Results driven.

- Commitment to our Clients
- Commitment to our People
- Commitment to your Results

Integration

TECHNICAL SPECIALIZATIONS

An advantage to working with Arc-Intel is the efficiencies you gain by dealing with a partner who can provide solutions for all of your technical resource needs.

Whether you are in need of a developer to expand your team, an entire project team or resources spanning across vast geographic areas, Arc-Intel has the experience and delivery capability to help in the following specializations:

Functional Engagements

We recognize the importance of having those key functional resources to drive technology initiatives. Arc-Intel has experience in providing resources ranging from Project Managers, Business Analysts and Technical Writers to Quality Assurance Specialists.

Development

Arc-Intel understands the complexity of today's technology development landscape. Our delivery teams are capable of providing development professionals ranging from Senior Architects to Developers in highly complex web application and client server environments to legacy mainframe environments.

Enterprise Data Management

Today's challenging business market requires organizations to have the data to make business decisions quickly and with confidence. Arc-Intel has the ability to provide resources to meet these demands in multiple areas: Database developers and modelers, from highly skilled data warehousing experts all the way to Enterprise Resource Planning (ERP) and Business Intelligence professionals.

Infrastructure

Arc-Intel recognizes that all organizations must have an infrastructure solution in place to support their business. Arc-Intel can provide key resources in areas such as Infrastructure design and implementation, security and disaster recovery, systems administration to key help desk and desktop support roles.

IT's all about "Taking Care of Business"

OPTIMIZE PERFORMANCE

REDUCE RISKS

MANAGE COSTS

With tight budgets and reduced headcount, organizations face challenges in either deploying new solutions or simply maintaining those in place.

Arc-Intel is a source you should consider for high quality consulting services at highly competitive prices.

WHAT MAKES THE DIFFERENCE, HOWEVER, IS THE PEOPLE.

Arc-Intel is in the business of finding talent... talent on which we can stake our reputation. Companies increasingly look to Arc-Intel as a strategic partner to deliver successful projects on time and on budget. Our clients require more than consulting on the software packages they own. What they need is strong project management professionals, database experts, brilliant software developers, and they need ERP specialists with industry specific domain expertise. More importantly, they need a partner that understands their needs and is committed to their results.
